

DEVICE, SYSTEM, AND METHOD FOR
CAPTURING EMAIL BORNE VIRUSESABSTRACT OF THE DISCLOSURE

5 A device, system, and method for capturing email
borne viruses are disclosed. In one form an input device
such as a keyboard, coupled to a system includes an email
function button and a identification key uniquely
identifying the keyboard. The keyboard's identification
10 key may be used with a system's email software program to
authenticate the origin of initiation of an email
communication.
